

General engineering

As an engineering service provider, we work continuously closing only for bank holidays. Shift patterns are not fixed but are client determined and offer a flexible solution to panic or emergency situations. Machine refurbishment, plant overhaul, Hydraulic engineering, light fabrications and weld reclamation techniques are services readily undertaken in our factory. We pride ourselves in our ability to work collaboratively with engineers, specifically focussing on maintenance or production difficulties. Where these working relationships have been established, they have proved to be highly successful. As a consequence, our multi-skilled team's depth of experience is fundamental to any submission made for retro-fit or reverse engineering solutions. In-house OHC capacity of 50, 40, 25 and 2 tonnes adequately supports all our workshop activities.

We have a varied client and industry list including companies such as: BP, Total, Tata Steels UK, Krohne Oil & Gas, Davy Markham, Cooper-Cameron, Sheffield Forgemasters, Associated British Ports and Pirelli.

Quality

Our ISO 9001: 2008 quality accreditation evokes the level of confidence needed in today's competitive environment. Lloyds, Det Norske Veritas and ABS frequently approve and witness the testing of our products.
